## **City of Dilley Has Received Grant Funds for Water System Improvements**

The City of Dilley has been notified that it will receive \$500,000 in funding from the Texas Department of Agriculture as part of a Community Development Block Grant.

The funds will be used to upgrade multiple components within the city's water treatment plant such as the replacement of an aerator and expanding the overall well capacity of the facility. Improvements will also be made at the Civic Center Well facility to include the installation of a permanent generator and upgrades to existing pumps.

The newly updated infrastructure will improve the communities water quality and distribution pressure.

This project is currently in the design phase. Once complete, it will modernize the current water treatment process and enhance the public water system.
